

Maritime2Mobile™

Low Cost Global Data Plans

Persistent Telecom Inc (PTI) has developed an innovative, approach to provide LTE cellular data connectivity to cruise ships, super yachts, passengers and crew using land-based telecom infrastructure.

Low cost. As a full Mobile Network Operator, PTI has engaged major carriers, in all of the maritime markets and negotiated highly discounted wholesale data roaming agreements. We provide SIM identities which register with the carrier as "local" subscribers; avoiding high cost roaming rates. Pre-purchasing bulk allocations of regional phone numbers allows for low-cost, data-services delivery, with no bandwidth throttling or roaming restrictions

Over-the-Air (OTA) least cost routing. As devices change locations (for example from the Mediterranean to the Caribbean) our SIM card signals our platform to determine which carrier offers the lowest rate and sends an Over-The-Air identity update' to the device. There is no need physically remove the Euro SIM and replace it with a Caribbean card. Our SIM does the swap automatically with no human intervention required.

.To facilitate voice and text communications over the data-only roaming, subscribers can download the free **TeleMagic App** which allows subscribers to place calls and send SMS messages to any regular cell phone number.

Other Apps like Waz App and Signal are peer to peer - limiting messaging to only those who have downloaded the same app. The **TeleMagic App** bridges the gap and allows App to cell phone number connections with others who do not have the application. It is completely transparent.

You will notice the savings right away when you see your bill. Much less than you are paying now.

PTI's platform currently includes coverage in the Caribbean, the Mediterranean, the USA and we are rapidly expanding to other cruising areas around the world.

Maritime2Mobile™

Enhanced In-Port Services

For the ship owners and managers, **Maritime2Mobile™** SIM card solutions support on-board data collection modems and IoT sensors.

Maritime2Mobile™ enables guests use of all their favorite apps on their own cell phones, tablets or laptops.

Maritime2Mobile™ communication charges can be billed to the passenger, the crew, the ship or the ship's operator via PTI's billing solution.

If a **Maritime2Mobile™** SIM card is installed in a Wi-Fi router on the ship - LTE service from the land is used as the backbone to deliver Wi-Fi to phones, tablets, laptops and IoT sensors on board.

As the ship pulls into port the **Maritime2Mobile™** platform automatically selects an account from the lowest cost local carrier and sends it to the **Maritime2Mobile™** SIM card installed in the ship board modems which then registers as a local subscriber **Maritime2Mobile™** systems improve productivity, increase privacy and enhance guest experience with the convenience of using existing phones and applications.

Real Time Customer Service If you ever have a problem, we actually answer the phone or email. No "chatting" with a website. No waiting on hold forever "due to unexpected heavy call volume, we cannot take your call at this time". Our staff is ready help you troubleshoot the problem and fix it "over-the- air". . . in real time.
