

nanoSEA™

Mobile GSM and LTE Wireless Maritime Data Networks

Persistent Telecom Inc. (PTI) enables stable, easy to operate wireless broadband data of 4G/LTE and 3G services on any ship at a fair, competitive price.

PTI has developed an innovative, new approach to add LTE cellular data connectivity to cruise ships and super yachts using land-based telecom infrastructure.

Persistent Telecom is a full LTE Mobile Network Operator (MNO) in the USA, with Network Operations Centers directly connected to global MNO's and satellite networks operators.

Persistent Telecom can deliver mobile data and route traffic from anywhere, directly to your location using the local cellular carrier.

nanoSEA™ services were developed to be used by yacht guests and crews' phones for high speed mobile data while in port or within range of cell towers.

For connectivity off the ship, PTI's SIM cards can connect with a local LTE 4G and 3G Mobile Network Operators.

The **nanoSEA™** SIM router solution provides Wi-Fi to those on board; using LTE backhaul to connect with the commercial carriers on land.

PTI's single, multi-operator SIM solution automatically switches to the local commercial carrier when arriving in a new territory; ensuring best quality coverage, data throughput and lowest wholesale pricing.

nanoSEA™ enables guests use of all their favorite apps on their own cell phones.

nanoSEA™

Mobile GSM and LTE Wireless Maritime Data Networks

Persistent Telecom SIM cards can be delivered directly to the yacht communications service resellers.

nanoSEA™ communication charges can be billed to the passenger, the crew, the ship or the ship's operator via PTI's billing solution.

PTI SIM solutions leverage a wholesale discount agreement with the local Mobile Operator which allows for a low cost, high volume, data delivery with no bandwidth throttling or roaming restrictions.

nanoSEA™ will maintain coordinated customer service between the Marine reseller, the Yacht's key personnel and the local Mobile Operator.

nanoSEA™ systems improve productivity, increase privacy and enhance guest experience with the convenience of using existing phone applications.

PTI's systems currently includes coverage in the Caribbean and rapidly expanding to other cruising areas around the world.
